The following visual-verbal space is constructed on thematic verbal lines that often guide the meter and idea of the pictorial experiments.

By and large I link to rhetoric or the relation between configuration of experience to its experientially available levels and potentials of reading. Often these lines of writing vary between neologisms and intertextuality towards an intratextuality, a polymorphic and metatropic state of drawing as movement in mind and matter at the remove of strings of virtuality according to the medium...

Collective Sites of Consciousness Subsumed to Collective Subjectivity

Apakoinu Construction: punning use of a word in defining a pair of contexts, in this drawing I have turned the amplitude of a drawing series into a kind of ampitheatre. The ethos of drawing as existing between color and monochrome expressively bends space in a dialogue of broadening ones outlook.

Anacoluthon: mixing syntax... in this drawing a kind of cave drawing syntax and computer space that seems to using marks in a kind of particle accelerator are some a spatial mix...both caveman and scientist are trackers... The ethos of relating to an “in camera” environment does not relinquish the pathos of relating to what is at hand but pursues expressive content through the sense of turning the environment demands, even as a thought experiment

Analyzing the Ambassadors

It would be interesting to study families that are multi lingual. The languages in that instance are absorbed as a unity. If one learns a language that is a unity. However Pidgins (such as French, which is a pidgin or creole of Latin) are examining a second language to another in order to learn ie when I lean Cambodian some their sounds are more lik J and some more G, I have to get my bearings. Similarly, the term "double hermeneutic" (hermeneutic means examining texts) refers to a distinction between the hard sciences and sciences in that the study of chemicals for example does not alter the chemicals or the objects studied if one can put the Huysman aside for a moment. Social studies on the other hand do alter that which is studied. The value of rhetorics, likewise, is to identify through the different levels of approach and usage how language is gauged. The term, implies this, Ling = toung and gauge relates to a pledge or direction, an intent. In this way a multidisciplinary context is established.

orical term, essentially a syllogism...

The drawings below show a morphological version of this idea, the morphology of the dry point that wet paper is pulled into the grooves of a plate with cut lines which recieve and release the paper and since ink has been rubbed in the grooves these inverted forms extrovert. In the cyber realm I have related this through the capacity of the hardware to create marks behind and in front of each other. The rhetoric thus is that of "transparency"

REFERENCE In Drawing: Fragmentation Modes of Cyber Drawing As Discourse

self is always truly discourse, that is to say, a dialectical encounter with the world, as a kind of "asking around" (per Heidegger's characterization of "discourse"). It has aspects of a facultative testing in this regard as it creates reflective models and paradigms within its own subjective world. Heidegger and the world together as his codicil on Kants' "The conditions of experience are simultaneously those of the objects of experience". Drawing is of value in this asking around because it is very natural, human, humane, and direct as it studies how we interpret ourselves and the world through the active shaping of vision. It produces the discourse that asks what reality is, what are its variations or virtualities and what can we make of it. The sense of different levels of abstract narrative as contained suggest a visual rhetoric or multi-layered inquiry.

Every act of drawing is consequent to its own internal sense of form, of Morphology as the way form arrives, of topology as the abstract common denominators of visual determinations, and topography as these categories manifest object states of their subjects and then make the subjects a kind of object. Traditionally this is the encounter and use of materials, the shape of the dome, the mouth of the pot, the shape of the collar, the appeal of the figure.

It will be that the abstraction of drawing that has developed is in the context of the new cyber world a structuring of experiential alternatives that create a sensorial field, and that this reverses the prior order of beginning with sensation. I will show that my drawing work seems to argue the case that sensation is played out and extending to Bas relief and freestanding sculpture, (ie drawing in space). However the new conditions of drawing in cyber space, as reflective of our collective mechanical poetic as it were projects sensorial experience itself as a meta level of world experience into this post material medium. In Doing so it produces intellectual means which in this complexity are a kind of transgression upon the earlier simple orders which model experience as tending a preliminary concept formation and I instead reverse this towards a sensorial field being that which is constructed. Up along the way, complexity yields a great deal of part of the process.

By then, drawing asks what things are, or how they might be and has usually connected to a variety of material expressions, these are covered by the Assyrian word "Skr" in which the resonance of the sound suggesting alternately "scratch" and "sculpture" indicate the stream of material resources from scratch to the end and extending to Bas relief and freestanding sculpture, (ie drawing in space). However the new conditions of drawing in cyber space, as reflective of our collective mechanical poetic as it were projects sensorial experience itself as a meta level of world experience into this post material medium. In Doing so it produces intellectual means which in this complexity are a kind of transgression upon the earlier simple orders which model experience as tending a preliminary concept formation and I instead reverse this towards a sensorial field being that which is constructed. Up along the way, complexity yields a great deal of part of the process.

And this quality of "double hermeneutic" (objects of study altered by the study) is its "virtual" dimension. This is a consequence of "usage".

An early Greek fragment, of Presocratic Anaxamander notes of Usage, "up along the way of usage they pay penalty to for their transgressions. This is the earliest recorded Western statement and has a resonance to our

in the formal field of rhetoric means relating to complexity. (More will be mentioned on contemporary media semiotics as relating the organic quality of complexity to a "neurological model").

A psychology of perception that motivate me is one which I would say links the very human, strange, and unique ideas of "zero" to that of "randomness".

These two concepts relate the changes that hollow out dimension, the first creates the famous drawing "negative space" or figure ground relation, the lump and the hollow, the zen empty bowl...

while randomness permits a recognition of freedom. Lacan was instrumental in creating the conditions of such a psychological dimension,

with an appreciation of Cezannes hesitations, his detachment from the phallic gaze (literally "fascination derives from Phallus) Observing as well that children were disturbed by separations from sensorial fields ie object passing out of view "disappear", touch that stops is a cessation, sounds that vary also reveal

then a connection, and to come to terms with these disturbances that stand between their instinct to cling on for dear life a concept formation is necessary to account for "zero", or if one prefers, changes in the sensorial field. The power of the void is then the strong design concept, and I have noticed my self that

when they are for example folded up, or speed off... at the age of ten I remember bursting into tears at a rocket launch and my startled father demanded an explanation which I could not remotely give.

It was to resolve the principle of randomness as an existential reality that can help people to back of from perceptions that they have not capitalized on opportunity, randomness removes the sense of violating an order while allowing the production of order and this translates into art denominations of realization (not

don't seek, I find" which Picasso adapted from Heraclitus's "expect the unexpected"

facultative testing" as I use the phrase relates the context of my own interests in cyber drawing as supporting the relation between "real" and "Virtuality". Phenomenology is the word interchangeable with facultative testing, in that the concern is with perception, how we create our perception and how drawing is the dra

as sense of Morphology, topology and topography as embedded discourse. The different sense of how things are real have long been conditioned within the field of rhetoric, projected by Aristotle to realize "ethos, pathos and dialectic", and these are essentially then the facultative testings of our sense of reality Eth

ates expression and dialectic regards our dynamism intersubjectivity and interactivity.

Neologism

Verba: the sense of movement in the argument... I am referencing through the drawing what are called in logic “morphological arrows, information retained through changing contexts. The Ethos of the example here is rooted in relating print like denominations of the drawing in the dialogue in which they traditionally have reflected on each other... the pathos being the impulse to find in drawing a constant branching out of its own dimension

Topothesia: Description of an Imaginary Place. These drawings are improvised structures relating to archaic carpentry forms that exist in a virtual world of cyber drawing. They are therefore in a sense imaginary structures, yet they inhabit their own computer space. The contradictory conclusion of the same set of information is in rhetoric termed an antinomy. The drawing carries the information of ancient structures built in pits, and I have borrowed a topography adapted from Boticelli's series on Limbo to create this topos of reference, and the pathos of a carving sense of form is dialectical to drawing through photo software.

Sprezzura– disguising effort : In this drawing the brush like strokes have no physical sensation to guide as in a real brush, only a mental map of movement interlocking that to be coherent have to dodge a number of obstacles of mirror like reverses...and no tapering motion intrinsic to a fluid brush... at the same time the translation into movement patterns made me look closer at brush work that I understood and realize there were more dimensions, out that ethos of brush connection the transformative plane of experience gives a Yuan dynasty like connection of sponge like metamorphic form.

Semantics : as perception of reality are taken up through my interest in creating archives. I am grouping these works as labyrinthine structures which in PDF or HTML form are entered on a broadly immersive scale .

Consequently the expressive value has to do with their establishing a kind of niche of their own reality, while the ethos of presentation of self through a media identification is placed in a mediation that involves a certain privacy even as an archive. Pathos pertains to the insistence on drawing as expression which is dialectical to both the fleeting perception and the permanent archive.

Polyphonic : Multiple voices, The drawing pairs the Chinese ideogram for heart with a drawing that creates a version of circulation in an architectural voice of organic form. The shift of mood is an expressive element, the context is combining a kind of niche space with its own broader flow and the general sense of usage in drawing is that of poiesis, the structural inclination of poetic mood and mode. The drawing includes the Chinese word Xin which is for heart, and the rhetorical term syllepsis which means a punning definition such as the general idea of circulation is reaching for in this work.

Paronomasia: play on words.. In the instance of this drawing this applies to the title “Motion Sensor Amain: this refers to the cyber drawing cyber ware as a kind of motion sensor of the hand: the term amain means either of the hand or forcefully.

Scesis Onomaton, using words with a certain relative topography to relate idea through a kind of listing... is an idea rather loosely used in the idea- drawing below which involves a series of word suggestive of experience generating experience using a format derived from the Iching characterization of natural forces.

The ethos of the idea resides in the association with the idea of associative trope given a momentum. The expressive content looks into the double take of visual verbal space.

Parachesis : repetition of sound in successive words: In the drawing I have compressed drawing elements to linear forms, like the mouth narrowing to a single position to form sound. The context is that of a linking motion across these linear element that jumps across field to join the broadening loop of space.

The sense of expression is through relating physical compression of drawing through ones muscles to this cyber activity in which the validity of drawing itself as being motion is it's own ethos. The dialogue of different shapes that one may ascribe to the idea of rectangle is broadened by it's interior imagery as shared across different shapes of a rectangle format.

Noema, a state of calculated obscureness, has presence as a rhetorical device within the works here through the process in which a masking process has been exaggerated to include hundreds of states. The blocks of imagery one sees on the sides become as a composite the central image which in and of itself shows little trace of so much commotion. The sense of pathos that accrues to such a manifold finds expressive relief in what appears the simplification.
